

## MATHS WORKSHEETS- GEOMETRY- FIND THE TWO UNKNOWN ANGLES IN ISOSCELES AND EQUILATERAL TRIANGLES

Find the two unknown angle measures.

## MATHS WORKSHEETS- GEOMETRY- FIND THE TWO UNKNOWN ANGLES IN ISOSCELES AND EQUILATERAL TRIANGLES

### Answer Key:

- $\angle c = \angle b = 43^\circ$   
 $\angle a = 180 - (43+43) = 94^\circ$
- $\angle z = 56^\circ$  (isosceles triangle)  
 $\angle y = 180 - (56+56) = 68^\circ$
- $\angle b + \angle c = 180 - 70 = 110^\circ$   
 $\angle b = 110/2 = 55^\circ$   
 $\angle c = 110/2 = 55^\circ$
- $\angle y + \angle z = 180 - 26 = 154^\circ$   
 $\angle y = 154/2 = 77^\circ$   
 $\angle z = 154/2 = 77^\circ$
- Equilateral triangle  $\angle s = 180 - 60 = 120^\circ$   
 $\angle r = 60^\circ$  (equilateral triangle)
- $\angle ACB = \angle ECD = 56^\circ$  (vertically opposite angles)  
 $\angle ACB = \angle ABC = 56^\circ$  (isosceles triangle)  
 $\angle a = 180 - (56+56) = 68^\circ$ ;  $\angle c = 56^\circ$
- $\angle d = 180 - (48+60) = 180 - 108^\circ = 72^\circ$   
 $\angle c = 60^\circ$  (equilateral triangle)
- $\angle p = 60^\circ$   
 $\angle r = 60^\circ$  (equilateral triangle)
- $\angle l = (180 - 48 + 48) = 104^\circ$   
 $\angle o = 180 - 48 = 32^\circ$   
 $\angle lnm = 48^\circ$
